

BEAUTY • DURABILITY • UTILITY

## Design Agreement

Thank you for asking Vue Custom Design to assist you in designing the outdoor entertaining space and aquatic environment you deserve. Vue Custom Design prides itself in designing the best aquatics environment given the customers desired look, style, and space available. We take in to account the architecture of the home as well as the surroundings to build a beautiful water structure which fits perfectly in the space provided while adding functionality and beauty to the overall project.

Vue Custom Design provides an initial 3D rendering & video of the house (or area being designed), the entire outdoor living space and the pool design for you to review. Future landscape master plan renderings can be added for a fee. After initial design review, changes can be made until the rendering is exactly what the customer envisions. Once design changes are finalized, the homeowner/project manager will be given a minimum of 3 photographic renderings and general construction drawings showing major dimensions needed for local plan review submittable and equipment/plumbing specs to be used as 'as built' or markup. These will not be stamped by a professional engineer but may be easily sent to an engineer in a .pfd or .dwg cad format if required. The software used is slightly limited in terrain slope to simulate actual/final grade but should give an accurate representation.

Design fee includes up to 25 hrs of phone/meeting, design, and revision time, which has generally be sufficient for most projects. If more time is required, it will be billed at a rate of \$75/hr. If travel is needed, client (homeowner/builder/project manager) will be responsible for travel expenses which include a meal per Deim (\$50/day) and, if applicable, mileage (calculated at std national mileage rate). Design process to begin upon receipt of payment.

Total Due \$950.00
